SUMMARY

Full Stack Software Engineer with 1+ year of experience building production-grade web applications and AI-powered systems using Java (Spring), MERN stack, and Python. Experienced delivering microservices architectures, RESTful and WebSocket APIs, JWT/RBAC security, and CI/CD cloud deployments on AWS. Proficient in integrating LLM technologies (OpenAI, Gemini, Claude API). Strong foundation in Data Structures & Algorithms, OOP, Agile/Scrum, and unit testing. Seeking a Software Development Engineer (SDE) role to build scalable, reliable systems.

TECHNICAL SKILLS

Languages	Java, Python, JavaScript, SQL, C
Frontend	React.js, Next.js, Tailwind CSS, Three.js, GSAP, Spline, EJS
Backend	Node.js, Express.js, Spring Boot, Hibernate ORM, Struts, REST APIs, WebSockets, Microservices
Databases	MongoDB, MySQL
Cloud & DevOps	AWS (EC2, S3, Lambda), CI/CD (GitHub Actions), Vercel, Render, Railway
Testing	JUnit, Postman, Unit Testing
AI & Tools	OpenAI API, Gemini API, Claude API, LangChain, OpenCV, PyAutoGUI
Core Concepts	DSA, OOP, SDLC, Agile/Scrum, Git, JWT, RBAC, System Design, Authentication & Authorization

WORK EXPERIENCE

Full Stack Developer (Contract) | Profit Paybook Pro Feb 2026 – Mar 2026

- Architected and delivered a full-stack HVAC business management SaaS platform (MERN stack) for a US-based client, designing and documenting 15+ RESTful API endpoints that improved operational efficiency.
- Implemented JWT-based authentication with Role-Based Access Control (RBAC) for 3 user roles, securing multi-tenant data; deployed on Vercel and Render with CI/CD pipelines achieving 99%+ uptime.
- Independently managed full project lifecycle requirements, architecture, API design, and cloud deployment as a solo freelance engineer.

Full Stack Developer Intern | Agarwal Packers & Movers Jun 2025 – Aug 2025

- Developed 5+ backend modules using Java Spring Boot, Hibernate ORM, and DAO architecture supporting 1,000+ daily transactions with improved data consistency.
- Collaborated in a 5-member Agile/Scrum team on 2-week sprints; improved modular architecture, reduced service coupling, and contributed unit test coverage using JUnit.

Technical Head | AWS Cloud Clubs, Medicaps University Aug 2025 – Mar 2026

- Led 10+ developers to execute 3+ hackathons with 200+ participants each; delivered 5+ workshops on AWS (EC2, S3, Lambda), Docker, and full-stack development to 150+ students.
- Grew club membership by 40% through structured technical mentorship programs and consistent community-driven project initiatives.

Technical Executive | Techno Clubs, Medicaps University Sep 2024 – Jun 2025

- Managed full frontend development and end-to-end technical execution of MoonHack, a 24-hour national hackathon with 300+ participants and zero platform downtime throughout the event.

PROJECTS

SevaAI (Municipal AI Assistant) — *Built at MoonHack* github.com/shubhamEDRVN/SevaAi

Developed a voice-enabled AI assistant using MERN stack, Gemini API, and LangChain to automate civic issue reporting and tracking. Implemented real-time WebSocket updates serving 50+ concurrent users with

sub-500ms message delivery, intelligent NLP-based request routing across 5+ issue categories, and scalable backend microservices. *Stack: React.js, Node.js, MongoDB, WebSockets, Gemini API, LangChain.*

Friday (AI Virtual Assistant)

github.com/shubhamEDRVN/Friday

Build a Python-based AI assistant integrating OpenAI, Gemini, and Claude LLM APIs with speech recognition, system automation, and real-time data processing. Supports 20+ voice commands with sub-2-second average response time, enabling hands-free workflow automation. *Stack: Python, OpenAI API, Claude API, Gemini API, SpeechRecognition, PyAutoGUI.*

Uber Clone (Ride Booking Platform)

github.com/shubhamEDRVN/Uber-clone

Engineered a full-stack ride-hailing platform with Rider and Captain modules supporting 100+ concurrent sessions. Implemented real-time GPS tracking using Socket.IO and Google Maps API with sub-500ms location update latency, JWT authentication, and dynamic surge pricing algorithms. *Stack: React.js, Node.js, MongoDB, Socket.IO, JWT, Google Maps API.*

Online Backup Planner (Enterprise Backup System) github.com/shubhamEDRVN/OnlinebackupPlanner

github.com/shubhamEDRVN/OnlinebackupPlanner

Built an enterprise-grade backup management system using Java Struts, Hibernate ORM, and MySQL, enabling automated scheduling for 500+ backup jobs and improving data recovery reliability by eliminating manual scheduling errors. *Stack: Java, Struts, Hibernate ORM, MySQL.*

3D Interactive Web Experiences

github.com/shubhamEDRVN/my-portfolio

Developed immersive portfolio UI components using Three.js, GSAP, and Spline for advanced animations and 3D visualizations, achieving high Lighthouse performance scores. *Stack: Three.js, GSAP, Spline, React.js.*

Eye-Controlled Mouse & Automation Bots

github.com/shubhamEDRVN/eye-Controlled-Mouse

Built a computer vision eye-tracking cursor control system using OpenCV and PyAutoGUI achieving 95%+ gaze detection accuracy. Developed Selenium automation bots that reduced repetitive task execution time by 80%. *Stack: Python, OpenCV, PyAutoGUI.*

EDUCATION

2023 – 2027 B.Tech in Computer Science, Medcaps University, Indore (CGPA: 7.7/10)

Coursework: Algorithms & DSA, OS, DBMS, Computer Networks, OOP, Software Engineering

ACHIEVEMENTS

- **4+ National Hackathon Finals (Innothon, MoonHack, HackWave, HackIt)** - competed and led cross-functional teams in 4+ national-level hackathons; reached finals in each, delivering production-grade full-stack solutions (MERN, Python, LLM APIs) within 48-72 hour sprints. Built SevaAI at MoonHack as primary architect - national finalist.
- **MoonHack Organizer** - managed complete technical execution of a 24-hour national-level hackathon with 300+ registered participants, ensuring zero platform downtime across all event phases.
- **Technical Head, AWS Cloud Clubs** - led cloud education for 150+ students; organized 5+ workshops on AWS (EC2, S3, Lambda), Docker, and full-stack development at Medicaps University.
- **Open Source Contributor** - maintained 6+ public repositories on GitHub spanning AI assistants, full-stack platforms, real-time systems, and computer vision; collectively covering 7+ technologies.
- **Freelance SaaS Delivery** - independently architected and shipped a production-grade MERN stack SaaS platform for a US-based HVAC client, including REST API design, RBAC security, and AWS cloud deployment.
- **Multi-domain Technical Expertise** - built projects across 4+ domains (web, AI/LLM, computer vision, 3D UI) demonstrating strong breadth in both frontend and backend engineering.
